👤 PROFILE

I'm an AWS Cloud & DevOps Engineer who enjoys building things that scale. Over the past year I've been hands-on with cloud infrastructure — spinning up EC2 environments, writing Terraform modules, building CI/CD pipelines from scratch, and containerizing applications with Docker and Kubernetes. Looking for a role where I can keep learning, contribute meaningfully, and grow alongside a strong engineering team.

🧠 SKILLS

Cloud

AWS (EC2, S3, VPC, Lambda, RDS, Auto Scaling, ELB, CloudFormation, Route 53, ACM, CloudWatch)

DevOps & Infra

Docker, Kubernetes, Jenkins, Terraform, CloudFormation, NGINX

CI/CD

Github Actions, Jenkins

Scripting

Python, Bash

Security & Monitoring

IAM Policies, Secrets Manager, CloudWatch, AWS Well-Architected Framework

Operating System

- Windows
- Linux (Ubuntu)

📁 PROFESSIONAL EXPERIENCE

AWS APAC Solutions Architecture Virtual Experience, *Forage*

01/2025 – 01/2025

Mumbai, India

- Designed an Elastic Beanstalk-based architecture for a client hitting scaling and latency issues — walked through how Auto Scaling and load balancing would solve their growth problem.
- Translated architecture and cost trade-offs into plain language for non-technical stakeholders, which turns out to be just as important as the technical work

Aws Cloud & DevOps Intern, *Genie Us Tech*

11/2024 – 06/2025

Bengaluru, India

- Provisioned and managed EC2 instances, VPCs, and S3 buckets using Terraform and CloudFormation — turning what used to be manual clicks into repeatable, version-controlled infrastructure.
- Built CI/CD pipelines with Jenkins and GitHub Actions that take code from commit to deployed container without anyone having to babysit the process.
- Wrote IAM policies with least-privilege access in mind and set up CloudWatch dashboards so the team could actually see what was happening in their environments.
- Identified over-provisioned EC2 instances and right-sized them — small change.

📁 PROJECTS

3-Tier Web Architecture on AWS, *Technologies:-Amazon S3, Route 53, ACM, EC2 (with Auto Scaling & ELB), VPC, IAM Roles, NGINX, Amazon RDS (MySQL), CloudWatch, GitHub Actions*

- Designed a full 3-tier architecture from scratch: static frontend on S3 with Route 53 + ACM for DNS and SSL, backend on EC2 behind an Application Load Balancer sitting inside a private VPC — built to survive an availability zone going down.
- Wired up auto scaling so the backend grows and shrinks with actual traffic instead of being permanently over-provisioned.

- Connected RDS MySQL for storage, Secrets Manager for credentials, and CloudWatch for alerting — the full stack, not just the compute layer.
- Automated releases through a GitHub Actions pipeline so every push goes through build, test, and deploy without manual steps

Serverless Real-Time Chat Application,

Technologies: AWS Lambda, Amazon API Gateway, WebSocket, Python

- Built a chat backend without a single server to manage — Lambda handles the compute, API Gateway WebSocket manages connections, and the whole thing scales automatically.
- Wrote connection management and message routing in Python; locked down API endpoints with IAM so only authenticated clients can connect.
- The architecture handles concurrent users naturally — no load balancer required, no capacity planning headaches.

Auto Scaling & Load Balancing Implementation,

Technologies: AWS Auto Scaling, Elastic Load Balancer (ELB), Elastic Compute Cloud (EC2)

- Set up Auto Scaling groups with both CPU-based and request-based triggers so instances spin up when needed and terminate when they're not — keeping costs tight without hurting performance.
- Put an Elastic Load Balancer in front to spread traffic evenly across healthy instances and remove any single point of failure from the setup

EDUCATION

Bachelor's Of Engineering in Computer Science & Design,

11/2022 – 06/2026

New Horizon Institute of Technology and Management, Thane 

Thane, India

- Pursuing core computer science subjects along with design thinking, UI/UX, and human-computer interaction.
- Built a strong foundation in software development, algorithms, and creative computing, enabling the ability to design user-centered digital solutions.

Diploma in Computer Engineering,

08/2019 – 06/2022

Dr. Babasaheb Ambedkar Technological University

Lonere, Raigad,

- Gained foundational knowledge in computer hardware, software, programming, networking, and database management.
- Developed problem-solving skills through hands-on labs and mini projects in languages like C, C++, Python, Os and Java.

COURSES

Master's In Full stack Development with Aws, Itvedant Education Pvt. Ltd

03/2024 – 03/2025

- Designed and deployed full-stack web applications using HTML, CSS, JavaScript, Django, Python with AWS cloud infrastructure.
- Hosted frontend on Amazon S3 and backend on EC2 within a secure VPC, using RDS for database management. Implemented CI/CD pipelines with GitHub Actions and Docker, ensuring smooth and automated deployments.
- Followed cloud best practices with services like Route 53, ACM, IAM, CloudWatch, and Secrets Manager for security and monitoring.

Thane, India
